SIGMARINE™ 48

General-purpose gloss finish – cost-effective above-water protection

An economical solution for above-water areas requiring good appearance

In current marine market conditions, fast and economical maintenance plays an important role. Increasingly, ship operators have to maintain the vessel's paintwork with limited crews and tight budgets.

SIGMARINE 48 is an economical finish coat that fits this scenario perfectly and helps to present a good corporate image whilst protecting the asset. This coating provides value for money, asset protection, and a professional appearance combined with minimal application cost and reduced application effort.

Ease of application – efficient onboard maintenance

The *SIGMARINE 48* finish can be used at new-build, when sailing or in dry dock, and is simple to apply and dries quickly – even at low temperatures. The coating is suitable for a range of application areas and adheres perfectly on intact conventional primers, such as *SIGMARINE 28*.

It is this versatility that makes it the ideal choice for use on deck and deck equipment, superstructure, topsides, engine room, main engines and auxiliary machinery.

Outstanding aesthetics – available worldwide

The high-gloss *SIGMARINE 48* finish offers good color and gloss retention and comes in an extensive range of colors available through our PPG color network centers. A modern color identification computer and an advanced blending process ensure that all tinted coatings match the specified color standards or corporate livery.

PPG color network centers can be found in all key ports along the main trading routes, so we can supply sea stock paints when and where customers visit key supply ports around the globe.

Independent approval

Certified by DNV as a paint system with low-flame spread in compliance with IMO Solas and Marine Equipment Directive (MED).

Features

- Water- and weather-resistant coating with good gloss retention
- Suitable for application at new-build, in dry dock and for maintenance
- Ideal for deck, deck fittings, interiors, superstructure and topsides
- Quick drying
- Good adhesion properties
- Easy to use and simple to apply

Benefits

- Economical maintenance – improved profitability
- Versatility – simplifies stock lists
- Easy to apply – less time, more productivity
- Single pack – less wastage
- Reliable and proven track record
- Available in any color of choice supplied through our global color network centers
- Supported by SIGMACARE® crew support and training package

For good appearance and efficient application – choose the *SIGMARINE 48* gloss finish.
